

Tag Tap

Android and iOS Smartphone App

Tag Tap is our free-to-use smartphone app that allows users to start, read and configure Tags, and gain crucial insights. Tag Tap combined with Tag Portal allows detailed access control of temperature logs, and the administrator can control the level of data access each user have.

The user can add images and custom fields data to the Tag. The custom fields are dynamic, and the user can enter them according to their needs. Tag API enables data transfer to customers ERP systems.

Tag Tap is favourable for last mile shipments and a wide spread of recipients, as the receiver's smartphone can read the Tag, and there are no need for dedicated infrastructure.
